Multi-Purpose Cleaner

Introducing the latest breakthrough in cleaning technology; water-soluble cleaning sheets, dissolve in water to create a powerful cleaning solution. Developed with an innovative surfactant based formulation which is set to revolutionise the cleaning industry.

- ✓ Dissolves at least 10 times faster (even in cold water) and uses up to 50% less chemicals than other solid cleaning products.
- ✓ Safer, easier and more accurate to use than liquid pre-concentrates.
- ✓ Occupies a quarter of the storage space with twice the shelf life compared to liquid concentrate cleaners.*
- ✓ Achieves at least an 80% reduction in carbon footprint for inner packaging and 75% reduction in the carbon footprint and cost for transportation and storage compared to liquid concentrate cleaners.*
- ✓ High performance formula capable of easily removing various soiling, compatible with a wide range of surfaces and leaves no residues behind.
- ✓ Highly versatile, proven capability of replacing dozens of different products currently used by customer to significantly simplify your portfolio – why use 20 different products when 1 will do?

*based on LPC quantities required to achieve cleaning performance comparable to well-known liquid concentrates used at their recommended dilution ratios (determined by in-house laboratory tests).

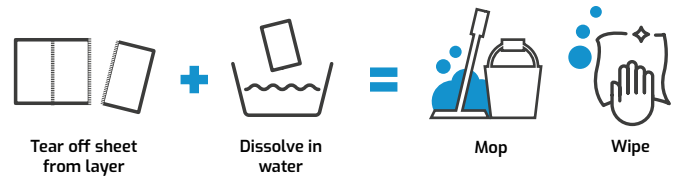

Life Protected Cleaner
Water Soluble Matrix

NEW

Introducing our Life Protected range of innovative & more sustainable products

36 sheets inside each pack

Innovation

An innovative surfactant formulation based on GV Health's new Water Soluble Matrix Technology

By reducing the amount of water required, our Life Protected Multi-Purpose Cleaner occupies less volume, reducing the cost and carbon footprint for transportation and storage.

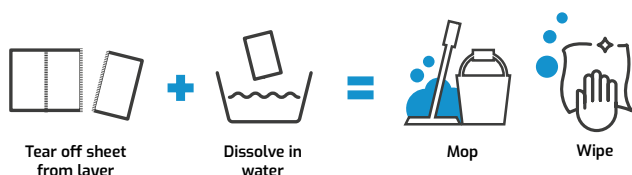

The future of cleaning technology

Convenience

With the cleaning chemicals already pre-measured in each sheet, users no longer have to worry about measuring and pouring the right amount. This saves time and effort, and also eliminates the risk of over-use or under-use, which can result in ineffective cleaning or waste. In addition, the sheets are easy to use and store, making them a convenient choice for people on-the-go. Sheets reduce storage space required by 4 times vs liquid concentrate cleaners.

Versatility

From spray bottles to mop buckets and automated cleaning equipment, the sheets can be used with all methods of application.

Refer to instructions on product for full guidance of use

Effective Cleaning

The highly effective cleaning formulation enables a high level of cleaning, achieved with minimal physical effort from end users, saving both time and labour costs in addition to convenience and sustainability. The Life Protected Multi-Purpose Cleaner is formulated with high-quality ingredients to effectively remove dirt from surfaces.

Summary of technical benefits

- Non-aggressive surfactant-based formula compatible with most surfaces (pH neutral and contains no aggressive chemicals such as solvents or oxidising agents).
- Doesn't leave residues behind or effect visual appearance.
- Fast to prepare: dissolves faster than all other solid formats such as tablets, encapsulated powders and loose powders.
- Easy to use (no need for manual measurement, all chemicals are pre-weighed in the formulation).
- Safer to store and use: no potential for splash risk or spillage during handling or storage.
- Wide range of usage scenarios including spray bottles, mops buckets and directly in toilets.
- Versatile usage on most common building materials and furniture found in clinical, domestic, industrial, institutional and commercial settings (excluding medical devices).
- Significantly reduced storage space requirements and simplifying logistics by reducing order frequency and improving volume linked price reductions.
- Reduced CO₂ footprint associated with storage and transportation.
- Reduced packaging waste.
- Contains no effervescent chemicals (unlike tablets and encapsulated powders), responsible for generating salt on the surface which creates visible residue. Also enables containers to be sealed during dissolution, which is not possible with effervescent products, due to pressure build up. Finally, this also enables an overall reduction in chemical use.
- Intended for use as both a standalone cleaning product and as part of a wider process for decontamination of hazardous spills by reducing bioburden prior to disinfection with a separate disinfectant.

| Code | Product | Pack Size | Dilution / Use |
|--------|------------------------|------------------------------------------------------|--------------------------------------------------------------------------|
| LPC036 | Life Protected Cleaner | Pack of 36 sheets (12 layers, 3 sheets per layer) | 1 sheet in 1 litre for hard surfaces 1 sheet in 2.5 litres for floors |
